

ESET NOD32 Antivirus 4

Business Edition

Endpoint Antivirus Protection

Combining powerful management tools, ease of use for end users, impressive performance, and state-of-the-art proactive threat detection, ESET NOD32 Antivirus is the most effective way to protect your business' valuable data assets while ensuring regulatory compliance.

Management Console – Antivirus – Antispyware

ESET NOD32 Antivirus 4 – Business Edition

FACT: The threats you aren't aware of pose the greatest risk

FACT: Criminals know this, and are flooding the Internet with over 100,000 new attacks a day. Some attacks target only a few users, making them very hard to identify using traditional antivirus technologies

FACT: Over 70 million users worldwide trust ESET's advanced heuristics technology—ThreatSense®—to proactively defend themselves from both stealthy and high-volume attacks

ESET NOD32® Antivirus is the most effective protection against today's huge volumes of Internet and email threats. It provides award-winning proactive antivirus and antispymware protection without affecting your computer's performance, while offering business-grade management control. Integrated SysInspector™ makes it easy for IT administrators to diagnose and resolve problems.

Using advanced ThreatSense technology, ESET NOD32 Antivirus proactively protects you from new attacks even during the critical first hours of a malware outbreak when other vendors' products aren't aware the attack even exists. ESET NOD32 Antivirus detects and disables both known and unknown viruses, trojans, worms, adware, spyware, rootkits and other Internet threats.

ESET NOD32 Antivirus is also one of the fastest antivirus solutions, so fast your users won't even notice it running. In fact, if you're replacing an existing antivirus product, your users will likely notice their applications are running faster.

For your IT and security teams, it's easy to build group policies and manage updates. For end users, it's incredibly easy to use and highly effective, so you'll see fewer help desk calls for virus outbreaks, or simple user questions.

ESET NOD32 Antivirus is security you can trust to meet your business security goals, every hour of every day.

KEY BENEFITS

Protection from the Unknown

Award-winning ThreatSense technology uses multiple layers of threat detection to deliver the most effective protection possible against new attacks. And ThreatSense is smart; it generates far fewer annoying false positive alarms than other products.

Finds Malware Other AV Companies Missed

Typically when a new copy of ESET NOD32 replaces another antivirus product on a computer the average user finds viruses or malware resident on the machine that were undetected by their previous antivirus product.

Built for Speed

ESET NOD32 Antivirus is lightning fast, so fast your users usually won't even notice it's there. Even disk-intensive operations like performing a "full disk scan" run smoothly in the background while your users work.

Supports Complex Compliance Requirements

ESET NOD32 Antivirus adds critical features, such as external drive access control and scanning, Cisco Network Admission Control (NAC) compatibility, as well as enhanced logging and reporting functions to support your compliance initiatives.

Easy on User Systems

ESET NOD32 Antivirus is "lean and mean," typically using just 44 MB of memory, a fraction of what other products consume. Because it's fast and light, upgrading your existing Internet security to ESET NOD32 Antivirus can literally be like buying a faster computer. It's a great way to realize extra life from your existing PCs.

Easy on End Users

ESET NOD32 Antivirus was already highly regarded for its ease of use. Now it's even easier to use, which will brighten your help desk manager's day. From its compact and intuitive user interface to its minimal use of alerts, your users will receive the best possible proactive detection against malware, without enduring excessive system slowdowns and alerts, reboots or annoying false positives.

Easy to Manage

ESET Remote Administrator provides a single management console to control an entire network from a single screen—supporting tens to thousands of computers. Installation, updates, alerts and other tasks are all easily managed from these intuitive screens. Integrated SysInspector makes it easier for IT administrators to diagnose and resolve problems.

WHAT'S NEW

Enhanced Remote Administrator

To effectively manage your networked systems, the updated console smooths Active Directory integration and simplifies policy creation. With support for Oracle, MySQL and MS-SQL databases, it also handles increasingly large deployments and runs significantly faster.

Smarter Scanner

Threats don't always enter your network in ways you expect. ESET NOD32 Antivirus inspects SSL-encrypted communication channels like HTTPS and POP3S and intelligently scans compressed files to find hidden threats other products miss. Proactive protection begins at the earliest point in system startup to ensure your network is always secure.

Clean and Safe Email

Email scanning for Microsoft Outlook, Outlook Express, Mozilla Thunderbird, Windows Live Mail, Windows Mail, and other POP3/IMAP mail clients, ensures your email is free of viruses and other threats.

Removable Media Security

Threats can enter PCs from removable media such as USB thumb drives. For self-running media, ESET NOD32 Antivirus scans AUTORUN.INF and associated files on mount and scans any file on any removable device on access or on demand. Power users can also adjust ESET NOD32 Antivirus to perform additional levels of scanning on removable media.

System Tools

Compared to other security suites, ESET SysInspector takes the most detailed "deep-dive" snapshot of a system's processes. It simplifies diagnosing infected systems by scanning system processes to find hidden threats, then assigns color-coded risk levels to all potentially threatening files. It can be used by your security and IT pros to help identify how a system was breached, or discover what's been changed on a system. The SysRescue feature creates bootable rescue CD/DVD or USB drives to help you repair an infected computer.

Self Defense and HIPS

ESET NOD32 Antivirus has built-in technology to prevent malicious software from corrupting or disabling it, so you can rest assured your system is always protected. Host-based Intrusion Prevention System (HIPS) protects your system from malware or any unwanted activity attempting to negatively affect the security of your computer. It couples advanced behavioral analysis with the detection capabilities of a network filter to monitor running processes, files and registry keys, and actively block inappropriate attempts to modify the OS or applications.

Usability Improvements

For administrators, version 4 offers:

- License Manager with simplified tools to manage multiple licenses with different terms
- Read-only access for management console which enables multiple administrators to share tasks without risk of overwriting configurations
- Notification Manager to keep administrators informed of all key events with customizable alerts
- Full support of Cisco Network Admission Control (NAC) compliance initiatives
- More efficient use of network bandwidth and improved log storage scalability
- Advanced Protection status screen that informs you of threat detections
- Password protection that prevents ESET NOD32 Antivirus from being uninstalled by unauthorized employees or visitors

System Requirements

Processors Supported:	Intel or AMD x86 / x64
Operating Systems:	Microsoft Windows 2000 Microsoft Windows XP (32- and 64-bit editions) Microsoft Windows Vista (32- and 64-bit editions) Microsoft Windows Server 2000 (32- and 64-bit editions) Microsoft Windows Server 2003 (32- and 64-bit editions) Microsoft Windows Server 2008 (32- and 64-bit editions)
Memory:	44 MB
Disk Space (download):	28 MB
Disk Space (installation):	35 MB
